

Volume 1, Issue 0 - FREE Press Release Issue

Understanding and applying the many changes that take place when the *National Electrical Code*® [*NEC*®] gets updated every 3 year can be stressful and a confusing time for even the most proficient user of the *Code*. In partnership with King Royal Publishing Group and Electrical Code Academy, Inc., we are pleased to introduce our monthly code change series designed to bring the most significant changes to the user of the code in an easier to understand format.

Over the next 12 months this series will identify several significant changes that are taking place in the transition from the 2017 edition of the *National Electrical Code*® to the 2020 edition of the *National Electrical Code*®. While may publications will be written on these changes, our effort is to bring an interactive monthly publication that will contain links, images and commentary to the changes that will help the end user of the *NEC*® by providing clarity and unity to the overall interpretation and implementation of the *NEC*®, such as this 2017 *NEC*® Change graphic used to illustrate significant changes as shown below.

Additionally, the series will provide detailed explanation to the significant changes to the *NEC*® and where necessary provide clickable links to videos and other articles that may provide additional insight into the changes being discussed. For example, if the presented change was in regards to GFCI [Ground-Fault Circuit Interrupters] requirements in section 210.8(A) a subsequent link would be provided, such as: 2020 *NEC*® Change - Section 210.8(A)(5)- Basements

The goal of this publication is to provide the most comprehensive, exhaustive, and informative explanation of significant 2020 *NEC*® Changes. Paul W. Abernathy was selected to author this series based on his over 30 years of his "no-nonsense" approach to explaining the *National Electrical Code*® in the most simplistic format possible. Paul also provides valuable insight into the *National Electrical Code*® as a member of *NFPA70*® Code-Making Panels #5 and #17.

The first official issue [Volume 1] is set to release on August 10, 2019. Each issue and subsequent issues will systematically move through the code and contain 5-8 significant changes per issue to be presented and explained. Each change will be supported by paraphrased code language crafted to emphasize the change as well as previously mentioned illustrations, where applicable to assist in overall comprehension of the change.

The subscription price is \$14.95 per issue or \$159.95 annually. Advance registration for this series is available at www.MasterTheNEC.com
